

# Scheduler PRO™

*"Having [Scheduler PRO™] has dramatically decreased the number of phone calls, faxes and emails to fix inaccurate call schedule information and made my job much easier. Having real time accuracy and efficiency is fantastic. We're in the 21st century now."*

-- Wendy (Internal Medicine, Univ. of Utah Medical Center)

## Scheduler PRO™ Advantages

**Scheduler PRO™ provides many key advantages over existing call-center solutions:**

- Accurate
- Efficient
- Easy
- Secure
- Timely

▶ **Information is accurate and schedule changes register immediately**

Information for an entire schedule needs to be entered only once. When changes occur, they are immediately viewable to any users of the system.

▶ **All communications are secure**

All information, both provider and patient, is secured and HIPAA compliant.

▶ **Customizable communication**

Customized paging access can be created for differing scenarios.

▶ **Communication tracking**

All communications are time-stamped, with tracking numbers and a record of the message sent. This tracking information can be printed or copied and inserted into patient records.

▶ **Shared calendars and schedules**

Schedules and calendars can be shared and combined, redeployed to department websites, etc.

▶ **Customized Report generation**

Reports can be generated showing personnel time scheduled in various areas (i.e. time on call, in clinic, covering services, etc.)

▶ **Relational work can be tracked**

Time spent with teaching service, in meetings, etc. can be easily tracked.

▶ **Pager numbers can be hidden**

Pager numbers may be visible or invisible, based on system settings.

▶ **Pages can be sent to any type of receiving device**

Pages can be sent to pagers or text-enabled cell phones, and messages are automatically made safe for numeric-only pagers.

▶ **More accurate information for providers**

Paging communications to providers can contain patient and situation information, thereby making the communication process more efficient.

▶ **Usage statistics**

Reports can be generated showing the number of pages sent to specific services and providers from specific areas of the hospital, peak times of usage for day, week, month, etc.

▶ **Communication security**

Communications can be based on Intranet-only access, protecting information and allowing non-Internet enabled computers to still access the call schedule.
